

ERP · PROYECTO DIORKA · COMPANY #1

Infrastructure & Delivery Status

What is built and running, the process flows already implemented, and what remains to be built — mapped against the Business Requirements Document (BRD).

Prepared for	Date	Working language	Fiscal locale
Canei Subirats, S.L.	17 July 2026	English (es/ca before handover)	es-ES · EUR

Source of record: BRD ERP-START-INPUT · intake/diorka/REQUIREMENTS-MAP.md · docs/delivery/DIORKA-DELIVERY-PLAN.md. All demo data is synthetic; no real filings, emails or payments are issued. Tax content is legally-defensible by design (legally_verified: false until the asesor's review).

Where the project stands

The system is produced by an **ERP factory**: a tenant specification is composed at build time from a shared kernel, capability modules, a Spanish jurisdiction pack and a construction/renovation vertical pack. Canei Subirats is company #1. The foundation (**Release R0**) is complete and continuously verified in CI; the paperless-quotation release (**R1**) is in progress.

BUILT & VERIFIED — R0

The engine runs

Composable architecture, Spanish VAT engine with persisted legal justification, immutable invoicing with gapless numbering + SHA-256 chaining, supplier price comparison, quote options & versions, chapter catalogue, PostgreSQL with row-level isolation, and a web workspace — all green in CI (~80 tests + live-database + browser end-to-end).

IN PROGRESS — R1

Quotation without paper

Catalogue-first quote builder (minimal typing for a non-digital user), customer-facing branded PDF, supplier-comparison and register screens, margin split hidden from the customer document, and two-owner sign-in. This is the current build queue.

CORPORATE IDENTITY

Their brand, as data

Canei Subirats' palette (greens + yellow spark), Roboto Serif / Inter typography, slogan and contact are captured and applied across the UI and documents as configuration — never a code fork. Working in English; Spanish/Catalan is a switch before handover.

GATED BY DECISIONS, NOT CODE

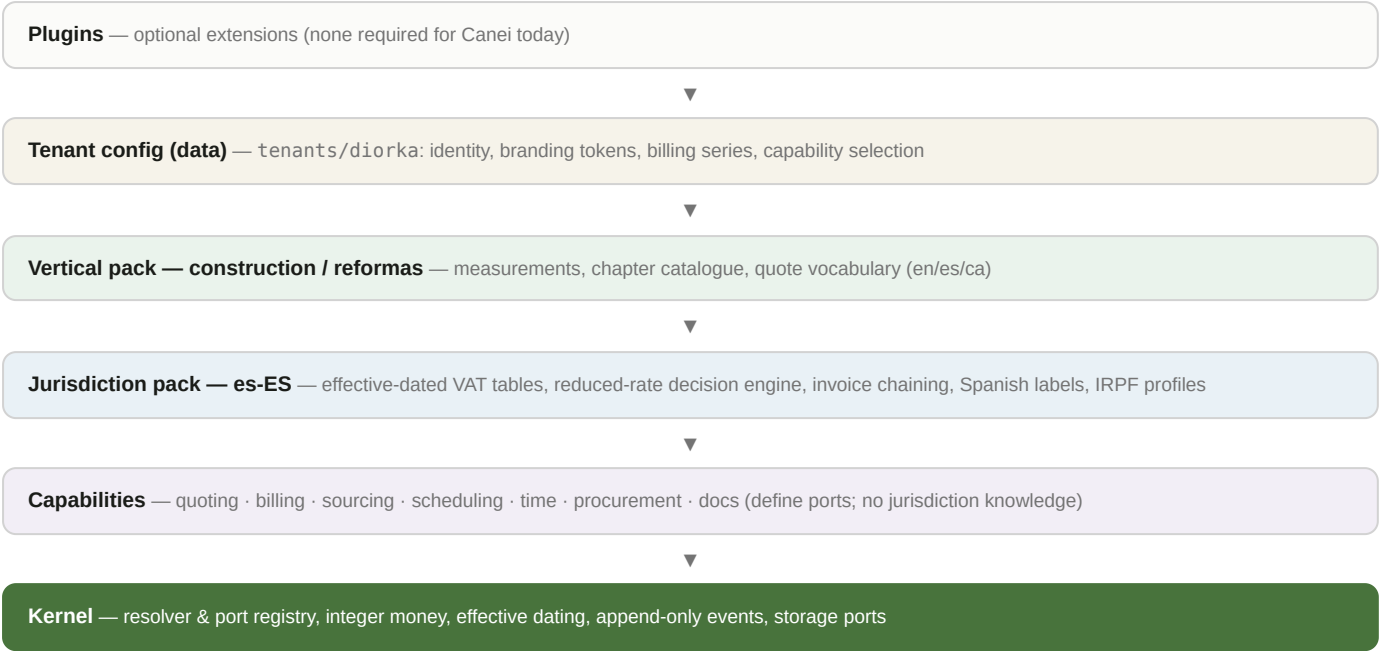

What we are waiting on

The owner validation workshop (legal names/CIFs, Catalan requirement, billing habits, supplier list), the asesor's tax sign-off before the first real invoice, and the EU hosting decision. None are provisioned autonomously.

How to read the status labels. **BUILT** works today · **CONFIG** data change only · **NEXT** queued release slice · **LATER** a later release · **EXCLUDED** out of scope per BRD §10.2.

The architecture that is running

Strictly layered, top calls down only. The **kernel and capabilities hold zero country- or sector-specific knowledge** — a build-time linter fails the pipeline if any tax word or sector term leaks into them. Customisation for a company is data in its tenant file, so a new company is configuration, not a code branch.

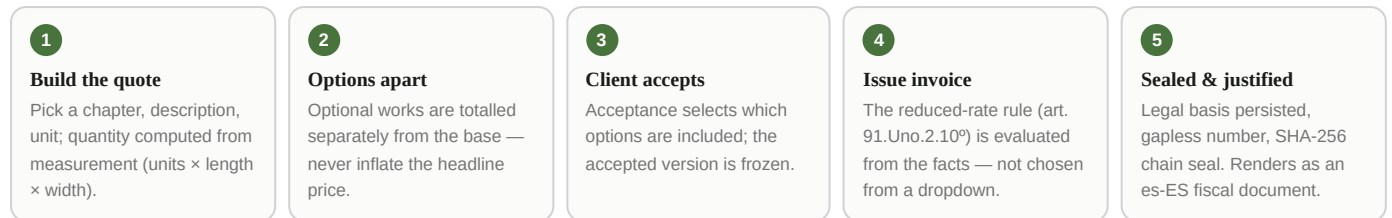

Cross-cutting foundations (all verified in CI)

CAPABILITY	WHAT IT GUARANTEES	STATUS
Integer money	All amounts in whole cents; quantities in thousandths; rounding is explicit — no floating-point drift on invoices.	BUILT
Effective-dated rules	A VAT rule is resolved for the invoice date; the system refuses to guess when a rate is undated. The decision + legal basis are persisted on the document.	BUILT
Immutable invoicing	Gapless FAC - YYYY - NNNN numbering, rectificativa path, invoices frozen once issued.	BUILT
SHA-256 invoice chain	Each invoice seals the previous one's hash — a tamper-evident chain.	BUILT
Multi-company isolation	PostgreSQL with row-level security; every row keyed and filtered by tenant. Cross-tenant invisibility proven in CI.	BUILT
Boundary & literal linter	Fails the build if a layer imports upward or a jurisdiction/sector literal leaks into the kernel.	BUILT
Factory CLI	resolve · validate · new-tenant · demo — a second company was created config-only in 0.02 s.	BUILT
Web workspace	Server-composed tenant runtime; lists quotes/invoices, drives quote → invoice, serves the rendered invoice.	BUILT
CI pipeline	lint · types · ~80 tests · build · boundaries · live-Postgres RLS · browser end-to-end, on every push.	BUILT

What a user can do end-to-end today

A · Quote → Invoice, with the VAT decided by rule

The rate is a **decision with a reason**: change the recipient, dwelling age or materials share and the engine switches between reduced (10%) and general (21%) VAT and records exactly why — `legally_verified: false` until the asesor signs off.

B · Supplier comparison

- Per-item and per-chapter totals across bidders vs. the initial estimate.
- Absolute and % variance; a **missing price is shown as missing, never as zero**.
- Selecting the winning cost is an **explicit choice**, never inferred — becomes the quote's cost basis.

C · Quote options & versions

- Optional lines separate from the base total.
- Accepted versions frozen; a revision creates a new linked version.

D · Chapter catalogue (catalogue-first)

- 18-chapter renovation catalogue seeded from the BRD as pack data.
- Drives the "choose, don't type" quote builder for a non-digital user.
- English labels now; Spanish keys preserved; Catalan labels ready.

E · Identity & language

- Canei Subirats brand applied across UI + documents (as data).
- English working UI with an es/ca switch for handover.
- Fiscal document always renders in es-ES (Spanish VAT + € formatting).

Verified end-to-end in a real browser: a bathroom renovation quote → acceptance with an optional → invoice at reduced VAT with persisted justification and a chained seal.

BRD §10.2

BRD AREA	STATUS	WHERE / PLAN
Multi-company: per-entity numbering, branding, tax (ORG-01..03)	BUILT	one tenant per legal entity; RLS isolation; group registry
Consolidated owner view across companies (ORG-04)	NEXT	cross-tenant dashboard over member runtimes
Roles / permissions, audit of changes (ORG-05..07)	NEXT	event log present; auth + roles in web shell
CRM: customers, leads, next actions (CRM-01..08)	NEXT	new c rm capability, after quotation slices
Site-visit capture, phone-first, photos (VIS-01..07)	LATER	mobile form + docs port
Work catalogue, chapters/items, room templates (CAT-01..08)	CONFIGNEXT	chapters seeded now; item catalogue w/ prices next
Supplier register, dated prices with source, discounts (SUP-01..06)	NEXT	price records carry source + effective date
Price comparison, variance, missing-price visibility (SUP-07..10)	BUILT	sourcing comparison engine (this cycle)
Quote: chapters/items/qty/price, totals, margin split (QUO-01..06,10)	BUILTNEXT	quoting built; cost-vs-selling margin fields next
Optional items separate from base (QUO-07)	BUILT	optional lines; base vs optional totals
Frozen versions + revisions (QUO-12..13)	BUILT	accepted quotes frozen; linked revisions
Professional PDF with correct company branding (QUO-15..16)	NEXT	doc-render port + Chromium PDF (R1)
Accepted quote → project baseline without re-entry (PRJ-01..05)	NEXT	project entity over accepted version
Planning: labour / machinery (PLN)	LATER	scheduling / time capabilities (declared, stub)
Purchases vs budget, returns / credits (PUR)	LATER	procurement build-out; links to sourcing
Change orders preserving baseline (CHG)	NEXT	quoted-vs-actual per chapter — a stated core pain
Customer invoices from quote / milestones, partials, receipts (AR-01..08)	BUILTNEXT	issue-from-quote + numbering built; receipts/allocation next
Supplier bills, duplicates, due lists, partial payments (AP)	NEXT	mirrors AR on the purchase side
Margins by chapter, cash in/out view (FIN)	NEXT	from sourcing-selected cost vs price + AR/AP
Documents / photos linked everywhere (DOC)	LATER	docs capability + storage port
Dashboards per owner profile + alerts (DAS)	NEXT	web views over events + due lists
Usability for a non-digital user, minimal typing (NFR-01..02)	BUILT	catalogue-pick-first design rule, applied
EUR + Spanish VAT (NFR-11)	BUILT	es-ES pack, effective-dated, justified
Spanish + Catalan documents (NFR-10)	CONFIG	label sets are data; ca-ES set queued
Reliability / backup (NFR-06,09)	BUILTLATER	Postgres + migrations; restore drill later
Ledger, payroll, warehouse/stock, portals, e-signature	EXCLUDED	BRD §10.2 — tracked, not built

From here to go-live

Strict order R1 → R4; each release is usable before the next begins. The calendar-critical path is the owner workshop and the asesor sign-off — not the code.

RELEASE	SCOPE	STATE
R0 · Foundation	Composable architecture, es-ES VAT + justification, immutable invoicing + rectificativas, quote options/versions, sourcing comparison, chapter catalogue, Postgres RLS, web shell.	DONE — CI-verified
R1 · Quotation without paper	Catalogue-first quote builder, cost/price/margin split hidden from the customer document, options/exclusions/versions UI, branded PDF , comparison + supplier/item registers with dated prices, two-owner sign-in. UAT = rebuild 3 real past quotes.	IN PROGRESS
R2 · Project control & money	Accepted version → immutable project baseline, change orders, purchases & supplier bills (duplicates, allocation, due lists, partials), customer invoicing incl. deposits/stage/partial + receipt allocation, margin by chapter + weekly cash view, persona dashboards + alerts.	PLANNED
R3 · Field & documents	Mobile site-visit capture, documents linked everywhere, tasks, weak-connectivity hardening, Catalan labels if confirmed.	PLANNED
R4 · Migration, hardening, go-live	Data migration (dedupe, dated prices, summary history), EU hosting + backup with restore drill, permissions hardening, gestor exports, training on real projects, parallel run, per-company cutover. Post-live: Verifactu certified mode before the 2027 deadline.	PLANNED

Immediate build order

- Branded quote PDF (QUO-15/16) + supplier/item registers.
- AR receipts & partial allocation; AP supplier bills with duplicate detection.
- CRM light (customers/leads/next action) + owner dashboards.
- Certificaciones / change orders — quoted-vs-actual per chapter.

Inputs we need (not code)

- **Owner workshop:** legal names + CIFs, Catalan requirement, billing habits, supplier list, gestor export format, devices.
- **Asesor sign-off** on tax & invoice content → `legally_verified:true` before the first real invoice.
- **EU hosting decision** (never provisioned autonomously) → before R4.

Explicitly out of scope (BRD §10.2): accounting ledger/filings automation, payroll/HR, warehouse/stock, automatic supplier-portal access, customer self-service portal, e-signature — unless later confirmed. Tracked, not forgotten.
